

A row of solar panels connected in series

Overview

A Solar Photovoltaic Module is available in a range of 3 WP to 300 WP. But many times, we need power in a range from kW to MW. To achieve such a large power, we need to connect N-number of modules in series and parallel. A String of PV Modules When N-number of PV modules are connected in series. The entire. Sometimes the system voltage required for a power plant is much higher than what a single PV module can produce. In such cases, N-number of PV. Sometimes to increase the power of the solar PV system, instead of increasing the voltage by connecting modules in series the current is increased by connecting modules in parallel. The current in the parallel combination of the. When we need to generate large power in a range of Giga-watts for large PV system plants we need to connect modules in series and parallel. In large PV plants first, the modules are connected in series known as "PV module.
