

Chinese solar panels are better to buy in China

Overview

At present, about 80% of all solar panels in the world and their source materials are produced in China. Chinese solar panels reached this dominant position through a combination of factors. First, China made a bet big on renewable energy. Years of massive investment in clean energy in general, and solar in particular. The emergence of the global solar module supply chain (described above) means that identifying where exactly solar panels are from is not always. Not every product made by a Chinese brand is going to be cheaper than domestic ones. However, despite being subject to extra import duties and tariffs designed to prevent China. Solar panels are a big investment, so it pays to do your research. But looking into every possible solar panel brand is usually not necessary. The best first step is usually getting quotes from local solar installation companies and. Here at SolarReviews, we assess brands based on various performance and value metrics. If you check out our list of the top solar panel manufacturers for 2023, you will see that four of the ten are Chinese companies. Here's a.
