

# Solar Photovoltaic Support System Specifications

## Overview

These specifications were created with certain assumptions about the house and the proposed solar energy system. They are designed for builders constructing single family homes with. The builder should install a 1" metal conduit from the designated inverter location to the main service panel where the system is intended to. EPA has developed the following RERH specification as an educational resource for interested builders. EPA does not conduct third-party. Builders should use EPA's online RERH SSAT to demonstrate that each proposed system site location meets a minimum solar resource potential.
