

Solar power supply undervoltage protection voltage

Overview

Undervoltage occurs when the average voltage of a power system drops below the nominal voltage, usually (around 230v in the UK, 220v in Europe and 110v for US markets). When devices are forced to operate on reduced power. Do not however, believe the false narrative portrayed online. Many blogs will tell you that low voltage and brownouts are different but Low voltage and brownouts are essentially the same. You should stay protected! Both the VoltGuard and FridgeGuard from the Sollatek iS range protect your electronic and electrical appliances.
