

Wall-mounted solar panel solar installation

Overview

Yes, solar panels can be mounted on a wall, either attached parallel to it, tilted at an angle, or hung as a canopy. This is usually a good option for properties with an unsuitable roof for solar panels – whether it's because of poor structural integrity or excessive shade. Tilting solar panels at an angle is usually the best. Wall-mounted solar panels are usually less effective than roof-mounted systems because they often have a steeper angle, so they don't. Properties that are most suited to wall-mounted solar panels are ones that have large south-facing walls, which aren't covered by any shade. South-facing panels are exposed to sunlight throughout the day, which is especially handy for wall-mounted solar panels. It'll usually take two to three days for wall-mounted solar panels to be installed –but this can vary, depending on the size of the property, the number of panels being installed, and the height of the solar panel system. Installation costs will also take scaffolding into account. A homeowner in a typical three-bedroom house in the UK can expect to pay around £7,026 to buy and install a set of roof-mounted solar panels. A wall-mounted system can cost a little.
