

What are the little things to know about lead-acid batteries

Overview

Lead-acid batteries are known for their long service life. For example, a lead-acid battery used as a storage battery can last between 5 and 15 years, depending on its quality and usage. They are usually inexpensive to purchase. At the same time, they are extremely durable, reliable and do not require much maintenance. Lead batteries are now available in different types: lead-gel batteries, lead-fleece batteries and pure lead batteries. The differences are mainly due to the material used as. Lead-fleece batteries contain acid as electrolyte, which is bound in a micro-glass fleece. An alternative term for this is Absorbent Glass Mat. Since no gas escapes from the sealed design, the batteries can be operated in close proximity to people and in enclosed spaces. In addition, they.
