## Overview

The lithium iron phosphate battery (LiFePO<sub>4</sub> battery) or LFP battery (lithium ferrophosphate) is a type of lithium-ion battery using lithium iron phosphate (LiFePO<sub>4</sub>) as the cathode material, and a graphitic carbon electrode with a metallic backing as the anode. Because of their low cost, high safety, low toxicity, long cycle life and other factors, LFP batteries are finding. LiFePO<sub>4</sub> is a natural mineral known as. and first identified the polyanion class of cathode materials for. LiFePO<sub>4</sub> was then identified as a cathode material. • Cell voltage • Volumetric = 220 / (790 kJ/L) • Gravimetric energy density > 90 Wh/kg (> 320 J/g). Up to 160 Wh/kg (580 J/g). Latest version announced in end of 2023, early 2024 made significant improvements in.
